FEATURES

- SECURE COMMUNICATION PLATFORM
- CHAT
- CLOUD-BASED STORAGE
- 2-WAY SMS
- NO DOWNLOADING
- SEND ADDRESS OR GEOFENCE LOCATION

Communicate directly with drivers

Chatterbox is a simple and easy-to-use add-on for the MiFleet Platform. It's a simple 2-way chat interface, allowing dispatchers to communicate with drivers directly to their phones using SMS messages. Using this chat you can send any address on the map, exchange images, coordinates, share routes, etc.
List of Available Units & Drivers

In the list of available units and drivers you can choose a "target" for your message. With a nice filter option you can simplify a search if the list of items is to big.

No Downloading

This feature is available directly on MiFleet so you will never have to download any additional applications. When dispatch sends SMS, driver receives it just like a normal SMS text.

Send Addresses & Geofence Locations

The application allows you to send not only send text messages, but also points of destination found in the search bar.

MiFleet ChatterBox solution connects dispatch with drivers. Contact sales@mifleet.us for more information.
